```
CC The invention relates to an isolated Sitosterolaemia Susceptibility Gene CC (SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP) CC binding cassette (ABC) family cholesterol transporter. SSG is useful CC for identifying a compound useful in the treatment or prevention of a CC sterol-related disorder, including sitosterolaemia, hyperlipidaemia, CC hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or nutritional deficiencies. SSG is also useful for treating cholesterol-cC associated diseases or conditions including coronary heart disease and CC other cardiovascular diseases, and sitosterolaemia-associated condition including arthritis, xanthomas and chronic haemolytic anaemia. SSG cexpression cassette is useful in the production of transgenic non-human CC animals. SSG genes and their homologues are useful as tools for a number CC ardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The present sequence is human SSG DNA. Human SSG is located on chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The invention also provides ABCG5 polypeptides and polynucleotides. ABCG5 gene is also known as sitosterolaemia susceptibility gene (SSG). Sequences of the invention are useful for treating or preventing sterol-related disorders such as sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis and nutritional deficiencies. They are also useful in gene therapy. The present sequence is human ABCG5 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sterol-related disorders e.g. sitosterolemia, hypercholesterol hyperlipidemia, gall stones, HDL deficiency, atherosclerosis, nutritional deficiencies -

                                                                                                                                                                                                                                                                                                                                                                                           CC The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying CC culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal. CC where an increase or decrease in ABCG5 biological activity in a control cell culture or in mammal. CC where an increase or decrease in ABCG5 biological activity on a control cell culture or mammal not CC contacted with the compound, identifies a compound that increases or CC contacted with the compound, identifies a compound that increases or CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC ABCG5 biological activity, or level of ABCG5 mRNA, or level of the CC polypeptide in a cell culture or mammal is also compared with that of a CC second cell culture or mammal is also compared with that of a CC simulation of ABCG5 activity is useful for treating or preventing CC hypersterolemia, arteriosclerosis, heart disease and/or Alzhelmer's CC disease. The method of the invention is useful for increasing cholesterol CC acid sequence represents the CDNA sequence of human ABCC5 gene located XX on chromosome 2p21.
                                                                                                                                                                                                                                                                                                                                                 Matches 2339;

The present invention relates to a new mammalian ATP-binding cassette C gene 5 (ABCG5) polypeptide. The invention is useful for identifying a C predisposition for developing sitosterolemia, arteriosclerosis or heart C disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and c measuring ABCG5 biological activity in the cell culture, or in mammal. C where an increase or decrease in ABCG5 biological activity compared to contacted with the compound, identifies a compound that increases or decreases ABCG5 activity respectively. The cell culture or mammal not c decreases ABCG5 activity respectively. The cell culture or mammal c c polypeptide or a wild type polypeptide. The C ABCG5 biological activity, or level of ABCG5 BRNA, or level of the c polypeptide in a cell culture or mammal is also compared with that of a c second cell culture or mammal comprising a wild type ABCG5 polypeptide. Simulation of ABCG5 activity is useful for treating or preventing c disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present nucleic carid sequence represents the human ABCG5 gene located on chromosome 2p21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel mammalian ATP-binding cassette gene 5 polypeptide, nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 38; Page 36-37; 66pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Patel SB,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying C a compound which alters ABCG5 activity level comprising contacting a cell CC culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal, which have ABCG5 polypeptide with a compound and CC where an increase or decrease in ABCG5 biological activity compared to CC ABCG5 biological activity in a control cell culture or mammal not CC contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity respectively. The cell culture or mammal CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC ABCG5 biological activity, or level of ABCG5 mRNA, or level of the CC ABCG5 biological activity respectively. The cell culture or mammal CC second cell culture or mammal is also compared with that of a Second cell culture or mammal comprising a wild type ABCG5 polypeptide. CC the invention of ABCG5 activity is useful for treating or preventing CC disease. The method of the invention is useful for increasing cholesterol activenting the present nucleic activenting energy and second cell culture or mammal comprisions. The present nucleic carid sequence represents the cDNA sequence of the mouse ABCG5 gene of the mouse ABCG5 gene of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

SSG is also useful for treating cholesterol-associated diseases or conditions including coronary heart disease and other cardiovascular diseases, and sitosterolaemia-associated condition including arthritis, xanthomas and chronic haemolytic anaemia. SSG expression cassette is useful in the production of transgenic non-human animals. SSG genes and their homologues are useful as tools for a number of applications including diagnosing sitosterolaemia and other cardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The present sequence is mouse SSG DNA. Mouse SSG is located on chromosome 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     binding cassette (ABC) family cholesterol transporter. SSG is useful for identifying a compound useful in the treatment or prevention of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                            The invention relates to ATP-binding cassette (ABC) family cholesterol transporter, ABCG8 polypeptides and polynucleotides. The invention also provides ABCG5 polypeptides and polynucleotides. ABCG5 gene is also known as sitosterolaemia susceptibility gene (SSG). Sequences of the invention are useful for treating or preventing sterol-related disorders such as sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis and nutritional deficiencies. They are also useful in gene therapy. The present sequence is mouse
                                                                                                                                                                                                                                                                                                             Claim 11; Page 73; 94pp; English.
                                                                                                                                                                                                                                                                                                                                                            New ABCG8 polypeptides and nucleic acids, useful for treating sterol-related disorders e.g. sitosterolemia, hypercholesterolemia, hyperlipidemia, gall stones, HDL deficiency, atherosclerosis, or nutritional deficiencies -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-NOV-2000;

                                                                                                           밁
                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                           The present invention relates to a new mammalian ATP-binding cassette C gene 5 (ABCG5) polypeptide. The invention is useful for identifying a credisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell C culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal, CC where an increase or decrease in ABCG5 biological activity compared to CC contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity respectively. The cell culture or mammal not CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC ABCG5 biological activity, or level of ABCG5 RNNA, or level of the CC polypeptide in a cell culture or mammal is also compared with that of a Second cell culture or mammal is also compared with that of a Stimulation of ABCG5 activity is useful for treating or preventing CC disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present nucleic acid sequence encodes the rat ABCG5 protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell CC culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal. CC where an increase or decrease in ABCG5 biological activity compared to contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity respectively. The cell culture or mammal not CC contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity, or level of ABCG5 mild type polypeptide. The CC ABCG5 biological activity, or level of ABCG5 mRNA, or level of the CC polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal comprising a wild type ABCG5 polypeptide. CC iscases. The method of the invention is useful for treating or preventing construction and/or decreasing cholesterol adsorption. The present nucleic acid sequence encodes the mouse ABCG5 protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying CC acompound which alters ABCG5 activity level comprising contacting a cell CC culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal, CC where an increase or decrease in ABCG5 biological activity compared to CC contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity respectively. The cell culture or mammal CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC polypeptide in a cell culture or mammal is also compared with that of a cecond cell culture or mammal is also compared with that of a cecond cell culture or mammal is useful for treating or preventing CC disease. The method of the invention is useful for increasing cholesterol CC excretion and/or decreasing cholesterol adsorption. The present nucleic acid sequence encodes the hamster ABCG5 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

SSG is also useful for treating cholesterol-associated diseases or conditions including coronary heart disease and other cardiovascular diseases, and sitosterolaemia-associated condition including arthritis, xanthomas and chronic haemolytic anaemia. SSG expression cassette is useful in the production of transgenic non-human animals. SSG genes and their homologues are useful as tools for a number of applications including diagnosing sitosterolaemia and other cardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The present sequence is an exon of human SSG DNA.

                                                                                                                                                                    The present sequence is that of human ATP binding cassette (ABC) cDNA fragment 168043, identified as a cholesterol-sensitive gene fragment. The invention provides cholesterol-sensitive ABC genes (see AAZ94734-63). These genes, and polypeptides encoded by them, can be used for diagnostic and therapeutic applications, and for blochemical or cell-based assays to screen for pharmacologically active modulator compounds useful for the treatment of lipid disorders, atherosclerosis or other inflammatory diseases such as

Gaps

The present invention relates to a new mammalian AFP-binding cassette gene 5 (ABCC5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCC5 activity level comprising contacting a cell culture or mammal which have ABCC5 polypeptide with a compound and measuring ABCC5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCC5 biological activity compared to ABCC5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or decreases ABCC5 activity respectively. The cell culture or mammal compounds activity respectively. The cell culture or mammal activity respectively. The cell culture or mammal activity respectively or a wild type polypeptide. The ABCC5 biological activity, or level of ABCC5 mRNA, or level of the polypeptide in a cell culture or mammal is also compared with that of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        second cell culture or mammal comprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease.and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present nucleic acid sequence represents the upstream genomic sequence, exon 1, intron 1 and exon 2 of the human ABCG5 gene located on chromosome 2p21.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP) binding cassette (ABC) family cholesterol transporter. SSG is useful for identifying a compound useful in the treatment or prevention of a sterol-related disorder, including sitosterolaemia, hyperilpidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or nutritional deficiencies. SSG is also useful for treating cholesterol-associated diseases or conditions including coronary heart disease and other cardiovascular diseases, and sitosterolaemia-associated condition including arthritis, xanthomas and chronic haemolytic anaemia. SSG expression cassette is useful in the production of transgenic non-human animals. SSG genes and their homologues are useful as tools for a number of applications including diagnosing sitosterolaemia and other cardiovascular diseases for foreneirs and naternity determinations.
                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 249 BP; 44 A; 86 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The present sequence is an exon of human SSG DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated Sitosterolaemia Susceptibility Gene
